

Functional Medicine: Hyperbaric Oxygen Could Prevent Military Suicides

By Dr. Michael John Badanek, BS, DC, CNS, CTPP, DACBN, DCBCN, MSGR./CHEV

Hyperbaric oxygen therapy (HBQT) could have tremendous benefits for the treatment of military veterans who have suffered blast injuries or post-traumatic stress disorder (PTSD). Some estimates are that PTSD is leading to the suicides of 20 U.S. military veterans every day, meaning more are killed by suicides than have died in combat in recent years. Studies by the National Brain Injury Rescue and Rehabilitation Project have shown that the great majority of these deaths could have been prevented by HBQT treatments, even when started later in the course of the disorder. This is not just a travesty, but a crime against our soldiers. For those who think that government medicine is compassionate and really cares about you, just review how the government chose to look after the men and women who gave their all for this country. We have more than 700,000 veterans with brain injuries being abused through neglect by the government they gave their all to protect. The HBQT studies funded by the U. S. military purport to find no benefit from HBQT treatments, yet virtually all of the objective independent studies found significant benefit. This is just what we have seen with studies concerning fluoride, vaccines, and statin drugs – just follow the money.

Dr. Badanek has been and currently is 40 years into active/private practice in the Ocala/Marion County, Florida region. Dr. Badanek practices Natural/Holistic Medicine through the use of Functional/Integrative Models for diagnostic and treatment protocols for the health challenged. Find him online at Dr.Badanek.com and www.alternativewholistic.com, and see what the facility has to offer the sick and health challenged. To schedule an appointment, call 352-622-1151
