

How Could Health Conditions in Another Part of Your Body be Connected with Your Teeth?

Everyone's body utilizes a complex network of tiny electrical flows. Without these flows, messages would not pass from the brain to the fingers, the heart would not beat, the nerves would not control the body, the organs would not function.

And every body possesses a grid of subtle electrical pathways on which these electrical flows travel. These pathways form the basis for the practice of acupuncture and are called *meridians*.

Your teeth are linked to these meridians, meaning that a malfunction in one of your teeth can affect the energy pathways with which it is connected and thus transmit this malfunction to other parts of your body.

Thus a toxic situation in a tooth may contribute to a disease or malfunction in an organ located far from that tooth. And a toxic or diseased condition in an organ can affect your teeth using the same pathway in reverse.

When you have a large amalgam (mercury and other metals) filling, a root canal, crown or partial denture with metal placed in your mouth, these changes may interfere with the flow of energy passing along a particular meridian. Electrical currents may become too high and thus involve inflammation, or be too low, a sign of degeneration.

For example, the meridians of the wisdom teeth are connected to the heart. So if any infection remains where a tooth was once extracted, this can create a poor environment for the health of your heart.

Conventional medicine is starting to make this connection, as they now relate heart disease to gum infection.

One of the deceptive things about this relationship is that damaging or toxic dental work may not show its effect on the related organs for years after the work was completed.

Look at the drawing to the right. Which of your teeth have been extracted, filled with amalgam or given a root canal? Do you have any illness, degeneration or inflammation in the related organ?

Natural or Biological Dentistry means utilizing the safest, non-metal dental materials that exist on the market, and eliminating metals and other toxic factors from the mouth. We also offer Neuromuscular Dentistry techniques that correct the relationship of the bones and muscles of the jaw, neck and head, resulting in relief of headaches, pain, jaw disorders and a long list of other problems. Our purpose is to help you achieve and maintain better health through a natural, holistic approach to your dental care.
